PROFESSIONAL SUMMARY

Backend-focused Python & Django Developer with hands-on experience building RESTful APIs and database-driven web applications. Strong understanding of Django fundamentals, Django REST Framework, and relational data modeling. Comfortable building CRUD systems independently and debugging backend issues across models, serializers, views, and migrations. Actively strengthening backend depth with real-world projects and disciplined learning.

EXPERIENCE

Web Developer Intern

A2Z IT Hub Pvt. Ltd., Nashik

May 2025 – Nov 2025

- Worked on Django-based applications involving database-backed features and admin interfaces.
- Assisted in developing internal tools and dashboards using Django and Bootstrap.
- Participated in debugging, testing, and version control using Git.
- Gained exposure to real client requirements and production-like development environments.

TECHNICAL SKILLS

Languages: Python, JavaScript (basic)

Backend: Django, Django REST Framework

Databases: PostgreSQL, MySQL, SQLite

Frontend (supporting): HTML, CSS, Bootstrap

Tools: Git, GitHub, VS Code

Concepts: REST APIs, CRUD operations, Django ORM, Foreign Keys, Serializers, HTTP status codes

PROJECTS

Independent Backend Projects (Django REST Framework)

Student-Course Enrollment API (Github - [link](#))

- Designed a Student–Course Enrollment REST API using **Django** and **Django REST Framework** with an explicit intermediate Enrollment model to handle many-to-many relationships.
- Enforced **relationship-level constraints to prevent duplicate enrollments** using database and serializer-level validation.
- Built context-aware endpoints to retrieve **enrollments by course and by student**, ensuring clean and RESTful API design.
- Implemented **state-based logic (ACTIVE / DROPPED)** to manage enrollments without deleting records, preserving data integrity.
- Used **separate serializers** for **read**, **write**, and **partial updates** to control data exposure and handle updates safely.
- Correctly handled **partial updates** (status change) by distinguishing between create vs update operations in Django REST Framework.

Blog Management API (Github - [link](#))

- Built a **RESTful** backend using Django REST Framework to manage authors, blogs, and comments.
- Implemented **ForeignKey-based** relational CRUD APIs using **function-based views** and **serializers**.
- Designed **read/write** serializers for clean API responses and proper foreign key handling.
- Created **filtered endpoints** to fetch **blogs by author** and **comments by blog**.

Expense Management API (Github - [link](#))

- Built a **RESTful** CRUD API to manage expenses with category-based relationships.
- Designed relational data models using **ForeignKey** associations.
- Implemented API endpoints for **create, list, update, and delete** operations using **function-based views**.
- Worked extensively with **serializers for data validation** and **response formatting**.
- Debugged migration issues, foreign key constraints, and **serializer errors** independently.

Library Management API (Github - [link](#))

- Developed a **backend API** for managing book records using Django REST Framework.
- Implemented **CRUD endpoints** and **validated JSON request/response workflows**.
- Strengthened understanding of **serializers, model-view separation**, and **ORM** queries.

Additional Learning Projects (AI-Assisted Exposure)

ResolvePro – Housing Society Management System (*In Development*)

- Explored Django project structure for a multi-module application using AI-assisted development.
- Worked with models and admin configurations to understand complaint and resident data workflows.
- Gained exposure to organizing larger Django codebases and relational data concepts.

Tech Stack: Python, Django, PostgreSQL

DocConnect – Healthcare Directory System

- Built a Django-based project with AI assistance to explore managing healthcare-related records.
- Used Django admin and basic CRUD patterns to understand real-world data handling.

Tech Stack: Python, Django, PostgreSQL

TransitIQ – Transport Billing Management System

- Created a learning project using Django to understand billing-related data models and workflows.
- Implemented CRUD operations with AI assistance for practice and exposure.

Tech Stack: Python, Django, MySQL

EDUCATION

B.E. in Information Technology

Sandip Institute of Technology and Research Centre, Nashik

2021 – 2024

CGPA: 7.51 / 10.0

CERTIFICATIONS

- **AWS Cloud Practitioner Essentials** – FutureSkills Prime (2024)
- **Java + Python Full Stack Development** – CoDingSeekho Institute (2025)
